Summary

I am a Site Reliability Engineering (SRE) and Platform Engineer Lead with 12+ years of experience building resilient, high-scale distributed systems that balance operational stability with developer velocity. This approach is defined by encountering and resolving critical production issues head-on, using every challenge to strengthen platform resilience.

I specialize in designing robust architectures and automating operations across AWS, GCP, Azure, and On-premise environments. I focus on Kubernetes, Infrastructure as Code, Distributed Systems, and Observability to ensure that reliability and security are part of the platform core by design.

I enjoy mentoring teams, contributing to open-source infrastructure projects, and engaging with tech communities. Sharing what I've learned helps me collaborate with others and solve complex operational challenges.

Experience

Nexthink

Madrid, Spain

SENIOR SITE RELIABILITY ENGINEER LEAD

Nov. 2025 - Present

- Leading SRE initiatives and mentoring teams to establish best practices across the organization. My role focuses on ensuring the reliability and scale of our global SaaS platform by driving a consistent engineering culture.
- Global SaaS Reliability: Ensuring the availability and performance of multi-tenant distributed systems serving millions of endpoints worldwide, maintaining 99.95% Service Level Agreements (SLA).
- Kubernetes on AWS: Scaling and managing Amazon EKS clusters with a focus on resilient workload distribution across 1,000+ nodes and resource efficiency using Karpenter.
- AWS Cloud Infrastructure: Architecting and maintaining the core SaaS data layer and event streaming services, leveraging Amazon RDS, Aurora, and Managed Streaming for Apache Kafka (MSK).
- SRE Best Practices: Defining the standards for capacity forecasting, Disaster Recovery, and active monitoring to ensure long-term platform resilience.
- GitOps & Automation: Defining the standards for Continuous Integration and Continuous Deployment (CI/CD) and GitOps principles (Flux, GitHub Actions) and Infrastructure as Code (Terraform) to ensure stable and predictable infrastructure delivery.
- Observability Strategy: Leading the approach for system visibility (Datadog) and proactive health management to reduce Mean Time To Recovery (MTTR) by 40% and improve platform resilience.
- AI-Driven Automation: Built custom AI plugins featuring LLM agents and skills to automate infrastructure tasks, reduce manual toil, and speed up incident response and root-cause analysis (RCA).
- Incident Management: Refining incident response frameworks and driving a culture of post-incident learning to minimize operational risk.
- Mentorship & Coaching: Mentoring other engineers and leads on Service Level Objectives (SLO), Error Budgets, and the reduction of operational toil through automation.

Stratio BD

SENIOR PLATFORM ENGINEER LEAD / SENIOR SITE RELIABILITY ENGINEER

Sep. 2017 - Nov. 2025

- Infrastructure Leadership: Directed the automation of Kubernetes clusters across Azure, AWS, GCP, and on-premise environments using Ansible, Terraform and Crossplane managing 50+ clusters.
- Platform Architecture: Designed resilient, multi-tenant platform cores and automated complex workflows using Infrastructure as Code and custom Kubernetes operators.
- GitOps & Automation: Implemented Continuous Integration and Continuous Deployment (CI/CD) and GitOps principles (Flux, Jenkins, GitHub actions) to standardize infrastructure delivery, reducing deployment times by 70%.
- Observability & Reliability: Partnered with stakeholders to implement full-stack monitoring and logging frameworks (Prometheus, Grafana, ELK/EFK, OpenSearch) to ensure 24/7 system health and 99.9% uptime.
- AI Adoption: Integrated AI tools into the operational workflow to automate infrastructure deployments, improve monitoring, and reduce manual toil.
- Security & Tooling: Integrated security components like Vault and OAuth2 proxies to strengthen platform robustness.
- Customer Success: Guided 15+ enterprise clients through Kubernetes adoption, tailoring technical solutions to meet specific business requirements.
- Community Contribution: Contributed code to open-source projects like Kubespray within the Kubernetes ecosystem.

Stratio BD

Madrid, Spain

PLATFORM ENGINEER / DEVOPS ENGINEER

Sep. 2014 - Aug. 2017

- Cluster Automation: Developed automation solutions in Bash and Python for deploying and managing Mesos clusters, improving operational reliability by 50%.
- Service Integration: Integrated technologies like Etcd, Vault, and Consul to enhance the functionality and security of distributed environments.
- Platform Optimization: Provided technical expertise in platform adoption and customization based on specific client needs.
- Collaboration: Worked alongside the team to iterate and improve our deployment workflows.

- Wayra (Telefónica)**

MOBILE GAME DEVELOPER

Madrid, Spain

Jul. 2013 - Aug. 2014

- Responsible for building and deploying multiplatform mobile games into one of their start-ups at Wayra, a start-up accelerator initiated by Telefónica.
 - Created cross-platform mobile games for a top retail brand using Unity, ensuring seamless gameplay across iOS and Android devices.
- Freelance**

MOBILE APPLICATION DEVELOPER

Madrid, Spain

Jan. 2011 - Jun. 2013

- Built multiplatform mobile applications including game applications with Unity3d, Android native, iOS native, and HTML5 based applications with Phonegap.

Skills

SRE	Distributed Systems, Capacity Planning, Incident Management, Post-Mortems, SLI / SLO / SLA, Error Budgets
Platform	Infrastructure as Code, Kubernetes, Docker, Terraform, Crossplane, Ansible, Helm, Flux, Linux, On-premise
DevOps	GitOps, CI/CD, Git, GitHub Actions, Jenkins
Cloud	Amazon Web Services (AWS), Google Cloud Platform (GCP), Microsoft Azure
Observability	Datadog, Prometheus, Grafana, OpenSearch, Kibana
AI Engineering	LLM Agents, Custom Plugins & Skills, Prompt Engineering, LLM Orchestration
Programming	Go (Golang), Python, Bash
Languages	Spanish (Native), English (Professional)

Certificates

2021

CKA - Certified Kubernetes Administrator, The Linux Foundation

Education

UPM(Universidad Politécnica de Madrid)

TELECOMMUNICATION ENGINEERING (Ms. OF Sc. ABET/AEC ACCREDITED)

Madrid, Spain

Mar. 2008 - Aug. 2014
